Cemu - Bug #34

GFX selection and settings.xml corruption when GFX pack folder is on a different partition (using a link)

Cemu Version:			

Description

when using a symbolic link for the GFX folder and when the target is installed on a different partition, GFX selection and settings.xml are corrupted (empty nodes for GraphicPacks in settings.xml)

Surely due to relative path computation (work flawlessly if installed on the same partition)

=> use full path for GFX instead of relative one in settings.xml when packs are located on a different drive
