Cemu - Feature requests #207

Add option to change refresh rate

10/24/2019 02:10 PM - BrainyCabde

Description

It would be nice to adjust refresh rate through the emulator instead of relying on nvidia driver to change vsync to half refresh rate vsync to get 30hz for smooth 30fps. I could just use my g sync monitor, but when I play on my 4K TV I like to have smooth frametimes and even capping through rivatuner at 30fps doesn't give smooth frametimes as using half refresh rate vsync. Dolphin for example has this option to select resolution/refresh rate in the settings. I know there are other things way more important to go through atm, but if it's at all possible to do this, i'm sure many others would appreciate it as well. The only problem I have with using half refresh rate vsync is that it resets to normal vsync just by watching youtube or using any other flash player on the internet, which requires a system restart just to get it back. It's been a bug in Nvidia drivers for a long time and probably won't be fixed any time soon.
