

Cemu - Bug #271

Can't launch CEMU

02/09/2020 12:55 AM - ReceptiveRaptor

Status: Closed	Start date: 02/09/2020
Priority: Normal	
Assignee:	
Category: General	
API:	GPU Vendor/Model: rtx 2060
Cemu Version: 1.17.1	
Description	
<p>[Have you reviewed Serfrost's FAQ & Setup Guide?:] Yes</p> <p>[Cemu Version:]</p> <p>All versions, I was trying to get 1.17.1, but I have also downloaded previous versions and they all have the same error.</p> <p>[Cemuhook Version:]</p> <p>0.5.7.3</p> <p>[CPU Model:]</p> <p>i7-9750H</p> <p>[GPU Model:]</p> <p>Geforce RTX 2060</p> <p>[Laptop or Desktop?:]</p> <p>Laptop</p> <p>[Explain the problem you're having and what you've tried:]</p> <p>Basically this is a brand new laptop that has never had Cemu installed, I downloaded cemu, clicked on cemu.exe (and tried as an admin) and it loads for half a second, closes and creates a log Log1.</p> <p>I've tried to fix it in these ways:</p> <p>Went to the CEMU discord and was told I need the 2017 vcredists, I have visual studio 2019 installed and 2015/2017/2019 use the same vcredists, even so I repaired my installed, restarted the laptop and tried again, when that failed I uninstalled, restarted, reinstalled, restarted and still had the same crash/log output.</p> <hr/> <p>(I then realized while writing this post that CEMU links to a vcredists for 2017) This is the log I got when uninstalling 2019, restarting and installing 2017.</p> <p>See the top of the post for [Log2]</p> <p>2) Googled for my problem and found this post on reddit: https://www.reddit.com/r/cemu/comments/6rjdtj/cemu_crashing_on_startup/ Not that we even have the same issue but my dbghelp.dll doesn't have digital signatures in its properties menu.</p> <p>3) Everything listed under "Cemu refuses to open at all." & "Laptops with Dual Graphics" on Serfrosts FAQ/Guide</p> <p>4) I've now done a fresh install of windows 10, made sure to "unblock" cemu.zip and cemuhook.zip and it doesn't matter what harddrive I have cemu run from. Windows update is up to date, graphics drivers as of 09/02/2020 is 422.19</p> <p>I've been talking on discord, most of this report is a copy paste of the post I made on the subreddit, it's getting nowhere and I'm getting desperate because on this machine CEMU seems to be unusable.</p>	

and after all of that I still have the issue.

So I feel like I've tried a lot of things.

History

- *Status changed from New to Closed*

Cemu was crashing due to a 3rd party program trying to hook into it. whatever program is using this 'taskbarDockAppIntegration64.dll' delete that program and it will work.
