API: OpenGL, Vulkan	GPU Vendor/Model: RTX 2060 Super
Cemu Version: 1.18.2c	
Description Hi, I have the latest Cemu version, but Guacamelee Super Turbo Championship edition not works...is it normal? It appears a black screen immediately after the initial loading page...This behaviour for sure started from version 1.17. I remember that in older version it worked correctly Is it possible to fix it in the new version too? thanks!

Since the game runs just fine on the latest Cemu I assume this has been fixed.

If you still get the black screen issue please upload log.txt from Cemu folder after running the game
