

Cemu - Bug #523

Cemu crashes after selecting character in Tekken Tag Tournament 2

05/23/2021 02:25 AM - dezraj

Status:	New	Start date:	05/22/2021
Priority:	Normal		
Assignee:			
Category:	General		
API:	Vulkan	GPU Vendor/Model:	intel
Cemu Version:	1.22.13		

Description

As soon as I select a character in Tekken Tag Tournament 2, the emulator freezes for a moment and then crashes. If it's in full screen mode, it may freeze the whole system and I have to hard reset it. Perhaps this is related to the intel iGPU which I use. I currently don't have a dGPU to test it.

Setup:

Windows 10

i5-10400 with 16gb RAM

intel UHD graphics 630 with latest drivers

Default options in Cemu, just changed vsync to "double buffering" and enabled async.

Log attached. Thank you in advance for any help.

After six months, do you ever intend to check this bug? I can reproduce it 100% of times even until the most recent release. I wish I could afford to pay a dGPU and do some tests, but it's still very expensive in my country.

As of version 1.26.0 public release, I can no longer launch the game. Cemu status window shows "loading..." and the game never shows. I don't experience this issue with the other games I have.
