

Cemu - Bug #626

DSUController not listing controllers from another host IP

03/14/2022 03:33 PM - vitorrm

Status:	New	Start date:	03/14/2022
Priority:	Normal		
Assignee:	Petergov		
Category:	Input		
API:	Vulkan	GPU Vendor/Model:	-
Cemu Version:	1.26.2		
Description			
DSUController is not listing controllers from another host IP.			
<ul style="list-style-type: none">• I've tried to update the cemuhook.ini with the serverIP• I also have the "Input" section with the host set on the Setting.xml file, but not luck.• I have the latest cemuhook			
<pre><Input> <DSUC host="192.168.31.50" port="26760"/> </Input></pre>			
It works fine on Cemu 1.25.6 (With DSUClient).			
If I setup the controller on 1.25.6, then I hit update button on Cemu, after it updates to 1.26.2, the controller stops working.			
The reason I cannot have the controller connected to the same machine as the Cemu is that I'm running Cemu on Linux (PS4) and the tool available to make the controller work via Bluetooth on Linux is not working properly on my Linux distro and that tool does not seem to have much support anymore.			
Let me know if you need any logs (And guide me on how to get those, because I could not find logs for Input myself)
