<p>Description</p> <p>I have been stuck in Paper Mario Color splash ever since 1.12.2. I'm at the part in the 5th chapter where I have just gotten the megaphone Thing. Whenever I try to use the megaphone Thing in battle or at the Museum Cemu crashes every single time. This is definitely a hardware specific issue because other people have said it doesn't happen to them, and it has been a problem for me both on Windows 7 and after a clean install of Windows 10. My log file running on Windows 10 is attached.</p> <p>And here's where I first posted about this issue back when I was on Windows 7. It also has a link to my savegame for testing. https://www.reddit.com/r/cemu/comments/9t3xmc/paper_mario_color_splash_crash_when_using/</p>
