Description

Hey!

It would be great if we could have the mouse mappable to joysticks. I know it's already used for the gamepad, but maybe if it's mapped to a joystick you can press a button to toggle it to gamepad mode, idk. But it would be great to control the game with my mouse as well as my keyboard, as just using keyboard keys to control the right stick is very clunky and inaccurate for things like aiming and in general.

Hi
Is there a chance for a better keyboard and mouse support?
Not what is now, not with additional software but everything you need will be in the CEMU.

I really like the support in the Yuzu (Switch emulator) is everything you need.

I don't want to use that emulator, especially since I have everything from WiiU.

I am asking only the author of the CEMU to consider better keyboards and mouse support.
Thanks
