#### Description

I have both controllers plugged in and controller 1 selected as "Controller 1 XInput" and controller 2 selected as "Controller 2 XInput" but when I go to use the 2nd controller it doesn't work. If I use controller 1, it controls for both controller 1 and controller 2. In the input settings when I select "Controller 2 XInput" it kind of greys out the binding options and makes them unchangeable so maybe that has something to do with it? Also when I exit the Input settings and go back into them it switches the Input for controller 2 back to "Controller 1 XInput". Maybe upon exiting Input settings it switches it back due to a bug. I have controller 1 set to GamePad and controller 2 set to Pro Controller and the issue persists. I also tried deleting the "controllerProfiles" folder and setting it up again and that didn't help. Must be a bug. Any ideas?

Update: I just checked it again after restarting my PC and running CCleaner. I guess that fixed it for some reason. Still worth looking into to though just so we know what caused this issue so it can be prevented in the future.
